Product-minded full-stack engineer and team lead with 10+ years of experience building beautiful, user-friendly, performant, and accessible websites, apps, design systems, and APIs with TypeScript, Ruby, and Haskell. BSc and MSc in Computer Science, ETH Zürich.

Employment

Since 2025: Senior Full-Stack Engineer at Everyman, Zürich

As the third engineer at the fast-growing medical startup, I brought down accumulated technical debt significantly (e.g. reduced website build time from 3min to 8secs, and bundle size from 1MB to 90kB), while at the same time adding new features cutting through both the front- and back-ends of the patient-facing website/app, as well as the internal platform for doctors, pharmacists and customer support. (Astro, React, TypeScript, PostgreSQL, Claude AI, etc.)

2023-2025: CTO at Spatz (formerly Polaris News), Zürich

Startup building a user-generated hyper-local news platform, including a chatbot for user-generated content submission. We started the company from scratch, and following the lean startup methodology, iterated through several versions of the product, quickly scaling up to a dozen regions. I hired two people, and in close collaboration with marketing and design, built the product. (Astro, SolidJS, Kysely, Supabase, etc.)

2019-2023: Team Lead Front-End at Tamedia, Zürich

Tamedia is one of the largest media companies in Switzerland. I led a team of 11 developers responsible for the platform delivering 13 websites, including www.tagesanzeiger.ch. Our front-end service handled a sustained load of 150k reqs/min, with peaks exceeding 500k. Within Tamedia, our team pioneered a CI/CD workflow with feature-branch-deployments, and auto-deployment to production.

I helped grow the skill-sets of my team members, and by building trust, significantly improved communication and processes between various teams (design, CMS, analytics, etc). One of the

first things I did was to move our team and our Next.js codebase from JavaScript to TypeScript. One of the last things was to move the development of our native apps in-house: I hired one iOS and one Android dev, re-architected the apps as hybrid apps (Swift/Kotlin plus WebViews) and as promised, launched within a year.

2018-2019: Software Engineer at *Fision Technologies* (since acquired by Zalando), Zürich

Fision Technologies was a startup offering an app to take photos of your body, from which a 3D-model was constructed, which was used to give size-recommendations for clothes when online-shopping. I worked on both the React front-end, and Python back-end services.

2015-2018: Cofounder, CTO and Full-Stack Developer of 2324.ch, Zürich

My cofounder (a graphic designer) and I won an Impact Hub Zürich Fellowship with the idea of 2324.ch – a participatory hyper-local online news-platform. We quickly acquired four paying municipalities. Unfortunately, that was not enough to sustain our growth vision, so we decided to sell our company to Crossiety, a startup sharing our vision of an online village square.

In addition to forming our team and product strategy, I implemented both front- and back-end. My decision to go with a simple and proven stack (Ruby on Rails, PostgreSQL and some React) served us well, and allowed us to quickly iterate on the product.

2017-2018: Haskell developer for qua-kit at the Chair of Information Architecture, ETH Zürich

2015: Software engineer at *mp technology*, Zürich

2014: Internship at *Silk*, Amsterdam, The Netherlands

2011-2014: Webmaster of the Department of Computer Science at ETH Zürich

2012: Summer internship at *28msec*, Palo Alto, California, USA

Education

2008-2014: Bachelor and Master of Computer Science at ETH Zürich

2005-2006: Exchange year in Norway (high school in Kristiansund)

2003-2008: School in Horn and Kantonsschule Romanshorn, Switzerland

Projects

2025: Mastro – a no-dependencies, no-build-step static site generator and web framework for Node.js, Bun, Deno, Cloudflare Workers and Service Workers.

2019: PanWriter, a Markdown editor with pandoc integration.

2014-2021: regular contributor to pandoc, the widely-used universal document converter.

Skills

Programming languages:

extensive experience: TypeScript/JavaScript (Astro, Solid, React, Next.js, Express.js, Kysely), Haskell, Ruby (Rails and Jekyll), Python, HTML/CSS, SQL

some experience: Rust, Java, PHP, C/C++

Technologies used in production:

Agentic coding using Claude and Codex, PostgreSQL, MongoDB, Cloudflare, AWS (S3, CloudFront, Beanstalk, EC2), Datadog, GitHub, GitLab, CircleCI, Netlify, OpenAPI, Storybook, JWTs, A/B testing, unit- and integration tests, etc.
